Hardie board panel installation guide

Step 12
Lay the 4.5mm sheet across the bottom sheets. Sliding the top sheet over the bottom sheet will ensure better adhesion.

NOTE: Ensure that the joints of both the top and bottom sheets are offset by a minimum of 100mm.

Figure 15 Lay 4.5mm sheets across bottom sheets

Step 13
Repeat Steps 5, 6, & 7. Make sure that the required amount of laminating epoxy is applied over the bottom sheet where the next top sheet is to be placed (refer to Steps 11 & 12).

Step 14
Remove the excess epoxy using a spatula as shown.

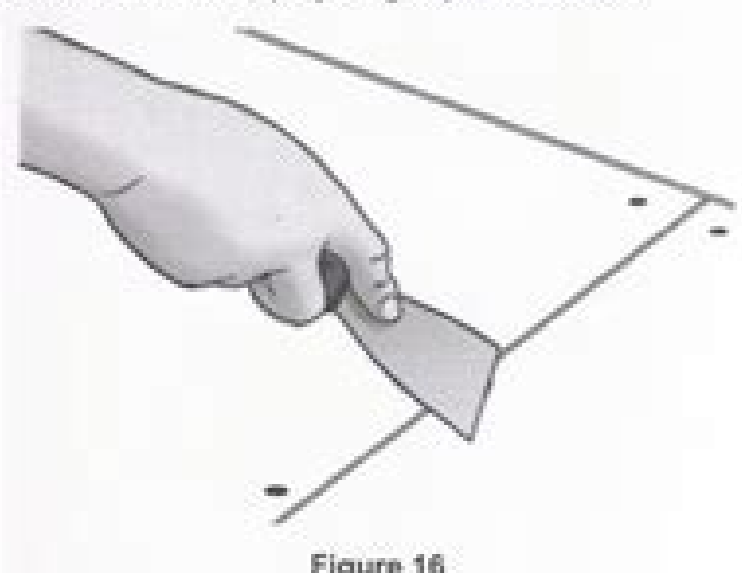

Figure 16

Step 15
Clean surface with damp cloth. Install tiles or other suitable surface finish.

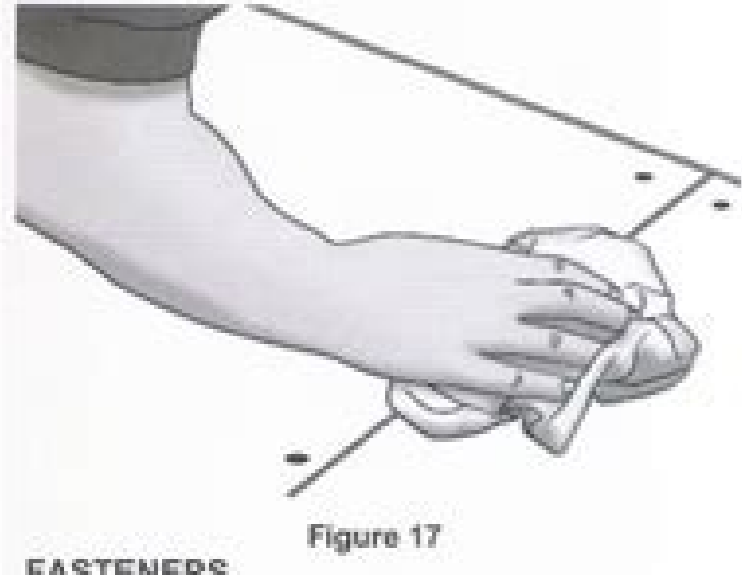

Figure 17

FASTENERS
For timber, use 32mm x 2.3mm galvanized fiber cement nails with a minimum head diameter of 6mm.

For fixing to 1.2-1.6mm BMT steel framing, use 32mm stainless steel grabber screws.

All fasteners are to be spaced at a maximum of 300mm along the joints. Fasteners are used to mechanically fix the 12mm HARDIFLEX fiber cement board to the joists.

MEMBRANES AND FINISHES

The waterproofing requirements of the relevant regulations must be met. Install floor tiles in accordance with tile manufacturer's specifications.

TILING

Tiles can be fixed directly to the HARDIFLEX flooring system using a proprietary tile adhesive. Refer to tile adhesive manufacturer for compatibility and application instructions. Arrange tiles so that a movement joint is carried through the tiles at all joints between the 4.5mm HARDIFLEX fiber cement boards. Caulk such joints with a flexible wet area sealant rather than a tile grout (Fig 18).

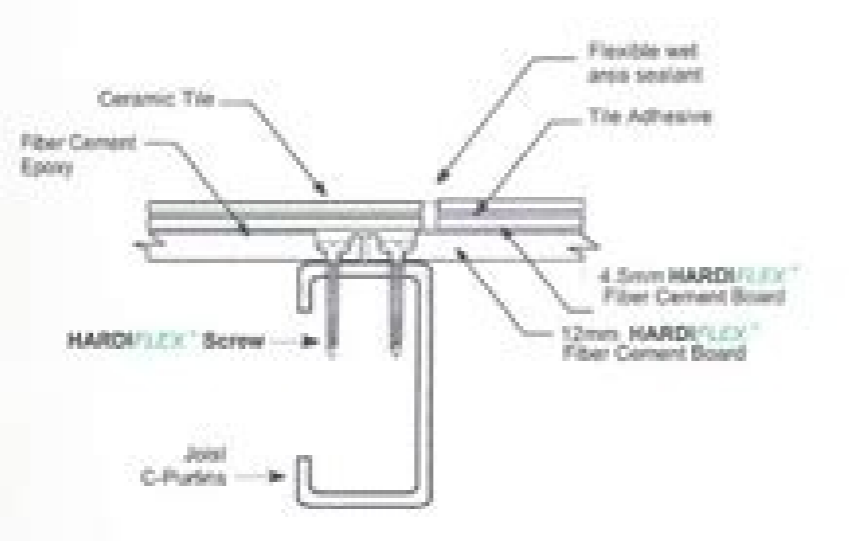

Figure 18

CONTROL JOINTS

A movement joint must be provided through both all floor sheeting and tiles, spaced at not greater distance than 5m in any direction. The movement joint should be 5mm wide and filled with a polyurethane sealant over a foam backing rod. See Fig 19. Movement joints must also be provided where the HARDIFLEX flooring system adjoins another flooring substrate such as timber flooring or concrete slab.

NOTE: The control joints must be supported by a floor joist or bridging member.
