Étape 7) Cliquez sur le bouton "INSTALLER". Eclipse is a free integrated development environment IDE that is used by programmers around to write software mostly in Java but also in other major programming languages via Eclipse plugins. The latest release of Eclipse IDE 2020-06 doesn't come with pre-build binary packages specific for Debian based Linux distributions. Instead, you can install Eclipse IDE in Ubuntu or Debian based Linux distributions via the compressed installer file. In this tutorial, we will learn how to install the latest edition of Eclipse IDE 2020-06 in Ubuntu or in Debian based Linux distributions. Requirements: A Desktop machine with a minimum of 2GB of RAM. Java 9 or higher installed in Debian based distributions. Install Eclipse IDE in Debian and Ubuntu A Java 9 or newer JRE/JDK is required to install Eclipse IDE and the easiest way to install Oracle Java JDK using third party PPA as shown. Install Java on Ubuntu/Debian \$ sudo apt install default-jre For installing Eclipse IDE in your system, first, open a browser and go to Eclipse's official download page and download the latest version of the tar package specific to your installed Linux distribution architecture. Alternatively, you can also download the Eclipse IDE tarball installer file in your system via wget utility, by issuing the below command. \$ wget After the download completes, navigate to the directory where the archive package has been downloaded, usually Downloads directories from your home, and issue the below commands to start installing Eclipse IDE. \$ tar -xvf eclipse-inst-linux64.tar.gz \$ cd eclipse-installer \$ sudo ./eclipse-inst The new Eclipse Installer lists the IDE's available to Eclipse users. You can choose and click on the IDE package you want to install. List of Eclipse IDE's to Install Next, choose the folder where you want Eclipse to be installed. Choose Eclipse IDE Installation Folder Once the installation is finished you can now launch Eclipse. Launch Eclipse IDE Eclipse IDE Install Eclipse IDE via Snap on Ubuntu Snap is a software deployment and package management system to manage packages on Linux distribution, you can use snap to install Eclipse IDE on Ubuntu 18.04 or newer using the following commands. \$ sudo apt install snap \$ sudo snap install -classic eclipse After installing Eclipse, navigate to the Activities Overview and search for Eclipse and launch it. ... That's all! The latest version of Eclipse IDE is now installed in your system. Enjoy programming with Eclipse IDE. TeCMint is the fastest growing and most trusted community site for any kind of Linux Articles, Guides and Books on the web. Millions of people visit TeCMint! to search or browse the thousands of published articles available FREELY to all. If you like what you are reading, please consider buying us a coffee ( or 2 ) as a token of appreciation. We are thankful for your never ending support. 1. Get the latest Eclipse Installer and extract the downloaded archive. 2. Run the executable "eclipse-inst" and follow the instructions to install the IDE. Recent versions of the installer bundle a Java runtime, so you don't have to worry about it. 3. After you run Eclipse for the first time, a sample .desktop file will be added to ~/.local/share/applications/. You'll need to make some changes to it. 3.1. Add the "Icon" option if it's not already there. 3.2. Set "?NoDisplay" to "false" It should look like this: [Desktop Entry] Name=Eclipse Platform Exec=/home/user/eclipse/ide/eclipse/eclipse %u Icon=/home/user/eclipse/ide/eclipse/icon.xpm NoDisplay=false Type=Application MimeType=x-scheme-handler/eclipse+command The page is under construction, see the email discussion for tips. Eclipse is an open-source integrated development environment (IDE) that helps programmers develop software applications and software components by providing developers with tools to compile code, debug applications, and much more. Eclipse IDE is mainly used for developing Java applications. But, you can also develop applications in other programming languages such as PHP, Python, Perl, R, etc., via plugins. Here, we will see how to install Eclipse IDE on Debian 11. Install Java Eclipse requires Java to be available on your machine. So, go and install the Java JDK. You can either install Oracle Java JDK or OpenJDK. For this demo, I will use OpenJDK 11. sudo apt update sudo apt install -y openjdk-11-jdk Verify the Java version on your machine. java -version Output: openjdk version "11.0.12" 2021-07-20 OpenJDK Runtime Environment (build 11.0.12+7-post-Debian-2, mixed mode, sharing) Install Eclipse On Debian 11 Install Eclipse IDE Using Installer Download the latest version of the Eclipse installer from the official page using a web browser. OR Download the Eclipse eclipse installer over a terminal using the following command. sudo apt install -y wget wget Then, extract the Eclipse installer package. tar -xvzf eclipse-inst-jre-linux64.tar.gz Now, run the installer as a regular user. cd eclipse-installer/ ./eclipse-inst Follow the installer wizard to install the Eclipse IDE. 1. Choose Eclipse IDE for Java Developers 2. Select /usr/lib/jvm/java-11-openjdk-amd64 as a Java VM and then choose the Installation Folder (under your home directory) for Eclipse installation. Then, click INSTALL 3. Click Accept Now to accept the Eclipse Software Foundation User Agreement 4. Then, wait for the Eclipse IDE installation to complete 5. Finally, click LAUNCH to start the Eclipse IDE Install Eclipse IDE Manually Visit the Eclipse download page to download the latest version of Eclipse IDE for Java Developers (v2021-09 R) using a web browser. You can also download Eclipse IDE for C/C++, PHP development from the same page. OR First, download the Eclipse IDE for Java Developers using the below command in the terminal. wget Then, extract the Eclipse IDE files to your desired directory (/opt). sudo tar -xvzf eclipse-java-2021-09-R-linux-gtk-x86\_64.tar.gz -C /opt Now, link the Eclipse executable to the /usr/bin path so that all users in your system can use Eclipse IDE. sudo ln -sf /opt/eclipse/eclipse /usr/bin/eclipse Next, create an Eclipse IDE application launcher for the GNOME desktop. sudo nano /usr/share/applications/eclipse.desktop Copy and paste the following content into the above file. [Desktop Entry] Encoding=UTF-8 Name=Eclipse IDE Comment=Eclipse IDE for Java Developers Exec=/usr/bin/eclipse Icon=/usr/eclipse/icon.xpm Categories=Application;Development;Java;IDE Type=Application Terminal=0 Launch Eclipse IDE You can launch Eclipse IDE by going to Activities >> Search for Eclipse IDE for Java Developers or using the eclipse command in the terminal. Choose a workspace for Eclipse and then click Launch. Eclipse IDE running on Debian: Eclipse IDE Running on Debian 11 Conclusion That's All. I hope you have learned how to install Eclipse IDE on Debian 11.
