The world today seems to be heading outside its limits. The same way India has decided to launch its orbiter into Mars and become one of the few countries with this ability. But, there are many problems that India will face and many issues that they must look into before focusing on such a drastic occasion that will change the view of the world. India needs to realize the downfall within its country before reaching out and helping others. The ignored economy. To begin anything, the first step is to recognize the capital resources needed to start such a big task. Kaul (2013) reported that more than 65% of India consists of poor people that fall below the [poverty](#) line; additionally, the Press Trust of India (2013) released that India makes up for the one-third poor people in the world. The question then arises why has India ignored the economic problem in the country to go and come back from Mars? There are many people in India who cannot afford to feed themselves with the current prices of meals as reported by Kaul (2013). This mission is not going to help the economy if the launch fails or if the orbiter fails to reach or come back stated by Hsu (2013). There is no guarantee the money spent on crafting will help the economy in the future.

The source of capital. The other issue, which aroused was where did India get the required

funding for this space mission. Many people believed, and still do, that most of it had to do with the British Aid Program provided by the UK says Bennett (2013). India had only shown interest in the space program after the UK had given the aid of £280 million, which seemed to be questioned by everyone if India had used this aid money for their purposes (Bennett, 2013). Moreover, India is a labor-intensive ...
