

# Environmental Causes of Breast Cancer

The screenshot shows the EssayPro website homepage. At the top, the logo 'ESSAYPRO' is on the left, and navigation links 'How To Order', 'Reviews', 'About Us', and 'Write My Essay' are in the center. On the right, there are links for 'DBA: EPRO', 'Log In', and a blue 'Sign Up' button. The main banner features a student sleeping at a desk with a cup of pens. Text on the banner includes 'WRITING SERVICE AT YOUR CONVENIENCE', 'You - Send us your homework We - Do it all for you', and 'Grab your original paper for just \$10 per page with a free plagiarism report included'. A 'Write My Essay!' button is present. A 'Calculate the price' widget is overlaid on the right, showing options for 'Writing', 'Rewriting', and 'Editing', with 'Writing' selected. It also shows 'Essay (any type)', 'College', '2 weeks', '1 page / 275 words', 'Double spaces' (selected), and a price of '\$11.4' with a 'Write My Paper' button. Below the banner, three review sections are shown: 'EssayPro Reviews' with a 4.9 rating, 'ResellerRatings' with a 4.9 rating, and 'Sitejabber' with a 4.8 rating.

In the United States, starting from the first breast cancer case in 1930s to today, a woman's lifetime risk of breast cancer increases to one eighth (Gray et al.). Continuously increasing breast cancer rate has caused a lot of concerns among not only ordinary people but also scientists. For decades, scientists have been working on the causes of breast cancer in order to find the corresponding methods of treatment. However, only about 25% of the breast cancer cases got explained (Brody et al.); till today, heredity, lifetime exposure to environmental estrogen (the female sex hormone), and the dietary fat are the only major known causes ("Cover Story: Breast Cancer and Environment"). For the 75% unexplained breast cancers cases, scientists, through various of researches, have come up with several hypothetical breast cancer causes, in which synthetic chemicals and environmental radiations are the major ones. A lot of evidence have linked breast cancer to the environmental chemicals. Since WWII, a great deal of endocrine disrupters (synthetic chemicals) have entered the environment, accumulated through the food chain, and finally accessed into human bodies (Brody et al.) . According to Gray et al., environmental chemicals are carcinogenic because they often interrupt hormone-regulated pathways, especially that of the estrogen, and thus cause negative genetic variations. Experiments carried out by Gray et al. indicate that breast tissue synthesize estrogen from local hormone (androgenic hormones) using aromatase, whose activity rate

is abnormally higher in breast cancer tissue than that of normal breast tissue. Theoretically, “estrogen promotes the growth cancer cells in vivo” (Mitra et al); the fact that women are more likely to ..... middle of paper .....al Causes of Breast Cancer.” Public Health Reports 111.
