

Identifying Potential Risk, Response, and Recovery

The screenshot shows the EssayPro website. At the top left is the EssayPro logo and navigation links: "How To Order", "Reviews", "About Us", and "Write My Essay". At the top right are links for "DBA: EPRO", "Log In", and "Sign Up". The main banner features a student sleeping at a desk with the text: "WRITING SERVICE AT YOUR CONVENIENCE", "You - Send us your homework", "We - Do it all for you", and "Grab your original paper for just \$10 per page with a free plagiarism report included". A "Write My Essay!" button is present. A "Calculate the price" calculator is overlaid on the right, showing options for "Writing", "Rewriting", and "Editing", with "Writing" selected. The calculator shows "Essay (any type)", "College", "2 weeks", "1 page / 275 words", "Double spaces" selected, and a price of "\$11.4". A "Write My Paper" button is at the bottom of the calculator. Below the banner, it says "NO MORE SLEEPLESS NIGHTS... 100% PLAGIARISM-FREE ESSAYS. ANY TOPIC OR DIFFICULTY CAN BE HANDLED!". At the bottom, there are three review sections: "EssayPro Reviews" with a 4.9 rating, "ResellerRatings" with a 4.9 rating, and "Sitejabber" with a 4.8 rating.

With identifying potential malicious attacks, threats, and vulnerabilities, measures need to be taken to deal with the malicious activities. A strategy is needed to deal with each of the risk of the malicious attacks and threats in the previous memo. Also controls will need to be setup to help mitigate those risks of the attacks. A strategy and controls need to also be setup to mitigate each of the vulnerabilities from the previous memo to help protect the computers and network for the business. There are different strategies that can be used for dealing with the risk of a malicious attacks and threats. The strategy used will depend on the type of attack and threat, the strategies are risk mitigation, risk assignment, risk acceptance, and risk avoidance. Risk mitigation uses controls to reduce the risk, the controls could be administrative, technical, or physical. "The wide variety of security threats demonstrates that traditional methods of protection, such as firewalls and anti-virus software, are not enough to shield companies from these new, complex and highly sophisticated threats. What is needed is a multi-layered approach to security that ranges from perimeter security to end-point systems through to the implementation of a security policy. This will ensure protection from unknown malware threats," (King, 2005). Risk assignment allows the business to transfer the risk to another business, for example storing backup tapes off site by using another business. Risk acceptance is the business accepting the risk, but the damages from the risk is low and could cost the business more

to reduce the risk than dealing with the loss. Risk avoidance is to avoid the risk by discontinuing using a software or hardware that causes the ri..... middle of paperrotecting the WAP and USB devices is to keep people informed and trained on how to use the wireless access and USB devices. WAP login information should not be shared or stored in the computers to connect by wireless. People should also be trained on how to scan USB devices for viruses and their home computer to prevent them from bringing a virus to work from their home computer. Works Cited Blue Coat. 2012.
