Describe your global issue in detail.

my global issue is over fishing Catching too much fish for the system to support leads to an overall degradation to the system.

Fishing with a high intensity to reduce the breeding stock levels to such an extent that they will no longer support a sufficient quantity of fish for sport or commercial harvest. deplete the stock of fish in (a body of water) by too much fishing http://overfishing.org/pages/what_is_overfishing.php

Who/what region is involved?

its an issue in North America, East China and Europe
<http://en.wikipedia.org/wiki/Overfishing>

How does this issue affect the United States? (Economic, social/humanitarian, other)

severe deterioration <http://oceeuropean-seas>

How does the number of people in the world affect this issue? Billions of people rely on fish for protein, and also way to many people fish and go over their limit for how many fish they can catch a day .<http://worldwildlife.org/threats/overfishing>

What are the short term, within the next year, consequences (neg. or positive) of this issue?

overfishing can have a devastating impact on ocean communities as it destabilizes the food chain and destroys the natural habitats of many aquatic species.it will cause environmental change and it will cause less fish for business
<http://www.seaweb.org/resources/articles/writings/safina1.php> <http://dujs.dartmouth.edu/winter-2012/the-threats-of-overfishing-consequences-at-the-commercial-level#.Uyr8QuhX-uY>

What are the long term consequences (neg. or positive) of this issue? The reality of modern [fishing](#) is that the industry is dominated by fishing vessels that far out-match nature's ability to replenish More than 85 percent of the world's fisheries have been pushed to or beyond their biological limits <http://worldwildlife.org/threats/overfishing>
<http://www.greenpeace.org/international/en/campaigns/oceans/overfishing/>

Research possible solutions for your issue? Solutions for the region and global solutions.

allow every [fisherman](#) or every vessel to only catch a specific amount of fish each. This would then need to be monitored closely by fisheries by weighing and/or counting every caught crop. Putting limits on the amount of fish that can be caught does make the prices to consumers and restaurants rise <http://www.ask.com/question/solutions-to-overfishing>

What is already being done regarding this issue? Is it working?

Fisheries are encouraged to stick to their Quota to limit the number of fish that can be caught at any time. There are only a set number of days that fishing is allowed. This way, there is some fallow days for fish to breed and reproduce.No-fishing zones have been marked in many areas to allow fishes to recover.
