Going to a community college is better than going to a vocational school straight out of high school. Vocational schools always have a lot to offer because they deal directly with one field of technology, but community colleges are more diverse and can get you a better set of skills to work out in the world. With the schools I'm considering it comes down to MIT and IVCC, being as my plans are to become an electrical engineer or a design drafter. When deciding between these schools I should consider what sort of housing they have, what athletics they offer, whether or not they have parking, what kinds of classes do they have, and all the degrees that they offer in my field of interest.

Electrical engineering is a specific area of engineering that has to do with analyzing and applying what you know to electricity, electronics, and electromagnetism (Wikipedia, "Electrical"). This field of engineering has a large variety of subfields, including: electronics, digital computers, power engineering, telecommunications, control systems, and many more (Wikipedia, "Electrical"). One reason why I want to go into electrical engineering is that there are so many choices for a career path to branch to and everything comes to me so easily. I find that I enjoy the work that I do and it's something that I am exceptionally good at. I can really see myself doing this as a lifelong career and not having to worry about getting stuck in a dead end job. The only thing I have to do to get started is decide what [school](#) I want to go to and which one will help me get to where I

want to be, the best.

Courses I will have to take for Electrical Engineering if I attend MIT will be: ET-121 Computer Systems & Applications, ET-127 Materials and Methods, ET-129 Gen...
