

Evidence to Support Darwin's Theory of Evolution

The screenshot shows the EssayPro website homepage. At the top, the logo 'ESSAYPRO' is on the left, and navigation links 'How To Order', 'Reviews', 'About Us', and 'Write My Essay' are in the center. On the right, there are links for 'DBA: EPRO', 'Log In', and a blue 'Sign Up' button. The main banner features a student sleeping at a desk with a cup of pens. Text on the banner includes 'WRITING SERVICE AT YOUR CONVENIENCE', 'You - Send us your homework We - Do it all for you', and 'Grab your original paper for just \$10 per page with a free plagiarism report included'. A 'Write My Essay!' button is present. A 'Calculate the price' widget is overlaid on the right, showing options for 'Writing', 'Rewriting', and 'Editing', with 'Writing' selected. It also shows 'Essay (any type)', 'College', '2 weeks', '1 page / 275 words', and 'Double spaces' selected, resulting in a price of '\$11.4' and a 'Write My Paper' button. Below the banner, three review widgets are shown: 'EssayPro Reviews' with a 4.9 rating, 'ResellerRatings' with a 4.9 rating, and 'Sitejabber' with a 4.8 rating.

There are many reasons why people should believe in Darwin's Theory of Evolution. One of the more compelling reasons is the anatomical similarities between different species. Still another reason to accept Darwin's Theory is the geographic distribution of species, meaning that certain plants and animals have evolved in specific ways to meet the needs of their isolated environments. Another reason to support the theory of [evolution](#) is the [fossil](#) record of change over time throughout earlier [species](#). Lastly, scientists have recorded genetic changes in a certain species over many generations which support Darwin's Theory. Those changes indicate that evolution is occurring. For all those reasons, Darwin's Theory of Evolution makes scientific sense and should be respected.

First off, there are many anatomical similarities between completely different species of organisms. One of the more well known similarities is that between apes and humans. Many people don't accept this proposal as being true because it offends their religious or personal beliefs, but there do exist some very compelling facts to support the argument that mankind did in fact evolve from apes. The first similarity is that their overall size and general physical frame are quite alike. Another similarity is that both man and ape have a broad rib cage which extends past the vertebral column. What this means is that both humans and apes have rib cages that are slightly bigger than most mammals and which

extend beyond their back bone, also known as the vertebral column. Yet another prominent similarity is that both have their scapulae located on their back, and their shoulder blades are located on their sides. These anatomical similarities are significant...
