

Hydraulic Fracking Should Not Be Allowed Essay

The screenshot shows the EssayPro website homepage. At the top, the logo 'ESSAYPRO' is on the left, and navigation links 'How To Order', 'Reviews', 'About Us', and 'Write My Essay' are in the center. On the right, there are links for 'DBA: EPRO', 'Log In', and a blue 'Sign Up' button. The main banner features a student sleeping at a desk with a cup of pens. Text on the banner includes 'WRITING SERVICE AT YOUR CONVENIENCE', 'You - Send us your homework We - Do it all for you', and 'Grab your original paper for just \$10 per page with a free plagiarism report included'. A 'Write My Essay!' button is present. A 'Calculate the price' widget is overlaid on the right, showing options for 'Writing', 'Rewriting', and 'Editing'. The selected option is 'Writing'. Below it, 'Essay (any type)' is selected. 'College' is selected for the level, and '2 weeks' for the deadline. The word count is set to '1 page / 275 words'. 'Double spaces' is selected. The price shown is '\$11.4' with a flame icon. A 'Write My Paper' button is at the bottom of the calculator. Below the banner, there are three rating sections: 'EssayPro Reviews' with a 4.9 rating and five stars, 'ResellerRatings' with a 4.9 rating and five stars, and 'Sitejabber' with a 4.8 rating and five stars.

Natural gas within shale rock formations is the new energy resource that is on the rise due to the decline of oil reserves in recent years. Though, the benefits of this recent discovery can be economically advantageous for our country's future. However, we have ignored water and air as a natural resource. These two resources are taken for granted by people all over the world, possibly due to the high abundance of both. [Water](#) and our atmosphere are two resources that are essential for life to thrive, and the production of natural gas through hydraulic fracking endangers these resources.

Hydraulic fracturing is a process which involves using heavily powered diesel machinery for drilling deep into the earth's crust. The goal is to release natural gases found within [shale](#) rock formations by injecting these rocks with water to create fissures to release the natural gas trapped within the formations. These fissures are held open by several agents including water, hydrocarbon chemicals, and silica sand. While these fissures are held open, gas is allowed to escape into the wells created by the hydraulic fracturing drill. The wells are surrounded by an additional cement casing which creates a chamber designed to house the released gases and push them up to the well surface above ground. The waste water mix containing hydrocarbons and silica sand are also expelled through these casing chambers along with the natural gas. These gases are collected in the by the wells above ground to be processed and transported to be used for

practical uses such as energy or heating. The waste water is also collected and stored in storm drain reservoirs where it is later brought to [sewage treatment](#) plants for disposal. As simple as this process may...

...e harmful to the environment by design but there is evidence to support its dangers otherwise. Though, the new energy source cleaner burning source of power than coal or crude oil, it may pose far greater harm to the environment through production rather than actual use. The natural resources that are essential to sustaining life should not be risked.
