# Behringer neutron patch sheet

Behringer neutron blank patch sheet.

However, most of the time when I wanted to create a certain sound or Patch our Eurorack Modular into it, the System-1m just didn't offer the flexibility we needed. We were pleasantly surprised to find the Neutron's analog Oscillators are also very stable. You might know exactly how all the knobs, buttons and cables are set but after working with hundreds of Patches and several other Synths, you're going to want a simple layout and instructions on every Patch Chart. And don't worry, I'm not collecting email addresses. If you like it, just email me at [email protected] I'll send you the PDF file. The digital Oscillators in the System-1m made them very stable and tracked across the keyboard very well. One way to indicate that 2 Patch Cables cross each other, is to draw a rounded "wow". In comparison to the Sunny Synths' Model D and Grandmother panels, this Neutron panel is thus offering much more possibilities of exchange between the synth and your PC or your controller thanks to the addition of the Neutron OS 2.0. Features: Behringer Neutron interface with similar way of working as actual synthesizer. So, even though it's easy to draw a straight line from the "LFO Out" to the "OSC1 In", once you start dealing with 10, 20, 50 or more Patch Cables, you'll end-up with random lines on your Patch Chart if you don't think-through "where" those lines are going to be drawn. So, for what it's worth, these are a few things I've learned over the years on how to write-out a Patch so you'll understand it years from now: When drawing lines where your Patch Cables are to be connected, be sure to use a contrasting ink color. Panel background adapted based on "Red" overlay from Heinakroon Top row of support "screens" with old look Visual feedback by using "LED" ring buttons and indication of the value (on change or on click) "Intelligent" display following parameters selection: OSC and LFO shape order change with or without blend All "hidden" 2.0 available for easy visualization and tweaking Bi-directional behavior when using the synth or a controller (only for parameters indicated in p27 and 28 of the Neutron manual) Envelopes graphs handled by mouse or classical ADSR rotary encoders Load / Save programs from individual .sfx files Global settings management Easy program renaming Display and export of program parameters as text file Ability to describe 9 input/output colored patch cables with different sources/destinations Programs have a name, author, save date and description. I realize that some Artists simply want the "journey" to be the "sound". Blank Patch Book for Neutron : Blank Patch Sheets Notebook Behringer Neutron | 6,5" x 11" A4 Large Notebook | 134 Pages | Very Useful | Convenient to keep your favorite patches in one book Notebook of 134 pages! 20 Blank Patch Sheets for Neutron Semi modular Synthesizer 4 Pages Patch List Glossy soft cover 8,5" x 11" A4 Large Notebook Very Useful Convenient for Behringer Neutron Feel free to flip through the book. The User's Manual does have a handy Patch Chart on page 27 but I fine-tuned it just a bit for our purposes. Remember, someone else may need to "interpret" your notes or YOU may be wanting to recreate that Patch in the future. There's a very good Review of the Neutron over at SonicState. They can be associated to a category Browser of the files on the disk Patch sheet tab with patch sheet for Neutron and other gear (external synths/sequencers) Automatic reading of wav files associated to a patch (in file browser) Manual/Automatic reading of any way file (in file browser) Standalone versions for PC and Mac v1.3: VST and AU versions for Mac The manual can be downloaded from the Sunny Synths' drive or website [www.sunnysynths.com](http://www.sunnysynths.com) For more info on getting this panel, please contact [sunny.synths@gmail.com](mailto:sunny.synths@gmail.com) Additional pictures: I have included it below for anyone to Download. It also has several Patch Points. See my examples below: CableOverCable2 CableOverCable1 Neutron Patch - example Neutron Blank Patch Chart Categories: Uncategorized Tags: behringer, blank, cable, chart, neutron, patch, roland, synthesizer, system-1m v1.3 2020-03-15 This panel can also be called "advanced patch mapper" and is not a full patch loader/saver as the Behringer Neutron does not support the load/save of programs or the manipulation of all its program parameters by Midi NRP/CC/Sysex messages except for about 40 of them (documented on p27 and 28 of the manual). The Neutron, on the other hand, has 56 Patch Points, which allow for many combinations of Control Voltage signal flow and audio modification. A "Patch Chart" is used with Synthesizers which don't offer a "Save" or "Store" for your sound creations. I found the patch sheet, which is delivered with the Behringer Neutron not informative enough and have developed this one. That's fine but there may still be times when you'll want to start with a certain "sound foundation" and, without being able to Save a Patch electronically, a "Patch Chart" will come in very handy. It finally arrived last week. A very useful to keep your favorite patches in one book. Since the Blank Patch Chart I made has "black" lines, I always use a "red" pen to draw the Cable lines. Be consistent. Although you may only be dealing with 1 or 2 Patch Cables in the beginning, your Neutron may later become part of a larger system, maybe a Eurorack Modular. Explain as much as you can and be clear as to "what goes where". The System-1m is a nice-sounding Synth. Enjoy your day! Rolf #neutron #music #sound #modular In June, Sylvia and I traded in our "Roland System-1m" (\$600) for the "Behringer Neutron" (\$300). If you've never used a Patch Chart, there are no real "rules" of how to draw-out and explain a Patch.
